The present invention describes a tubular of spherical nanostructure composed of peptides including no more than 4 aromatic or polyaromatic composed of peptides including no more than 4 aromatic or polyaromatic amino acids. Also described: [1] a method of generating a tubular or spherical nanostructure; [2] a field emitter device; [3] a device for obtaining information from a nanoscale environment; [4] an apparatus for electron emission lithography; [5] a memory cell; [6] a mechanical transfering information from a nanoscale environment; [9] a heat transfer device; [10] a method of emitting electrons; and [11] a method of con be used in a field emitter device; [8] a composition; [9] a heat transfer device; [10] a method of emitting electrons; and [11] a method of emitting electrons; and [11] a method of emitting electrons; and memory cell, a mechanical transmission device, an electronic inverter, and a matrix-containing composition. It is used in emitting electrons, in obtaining information from a nanoscale environment, in recording binary information from a nanoscale environment, in manipulating nanoscale objects, and motion, grabbing and/or in manipulating nanoscale objects, and transferring heat. The nanostructure is highly robust under extreme pheneratures. It enhances electromagnetic fields near ultra small memory material objects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                metal objects. The use of nanostructure as gates in electronic device allows operation at low gate voltage and enables the switching of several individual devices on the same substrates. The present sequence represents a beta-amyloid central aromatic core structure amino acid sequence, which is used in an example from the present invention for the nanotube self-assembly of Alzheimer's beta-amyloid core recognition
                                                                                                                                                                                                                                                                                                                                              Tubular of spherical nanostructure for e.g. use in obtaining information from nanoscale environment, is composed of peptides including aromatic or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

Patent No. 6319498

GENERAL INFORMATION:
APPLICANT: Findeis, Mark A. et al.
IITLE OF INVENTION: Modulators of Amyloid Aggregation
NUMBER OF SEQUENCES: 45
CORRESPONDENCE: ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD, LLP
                                                                                                                                                                                                                                                                  PATERLA INFORMATION:

Sequence 6921. Application US/09513999C

Sequence 6921.

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Duclert, A.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

FILE REFERENCE: 59.U82.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 1999-02-24

PRIOR PILING DATE: 1999-02-26

NUMBER OF SEQ ID NOS: 36681

Sequence 2, Application US/09123624

Patent No. 6149936

GENERAL INFORMATION:
APPLICANT: SCHRADER, Jurgen
APPLICANT: GODGEKE, Axel
TITLE OF INVENTION: DA EXPRESSION VECTORS FOR USE IN THE GENE THERAPEUTIC
TITLE OF INVENTION: TREATMENT OF VASCULAR DISORDERS
FILE REFRENCE: 511169-2004
CURRENT APPLICATION NUMBER: US/09/123,624
CURRENT FILING DATE: 1998-07-28
PRIOR APPLICATION NUMBER: 08/553,503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: SCHRADER, Juergen

Patent No. 6620616

GENERAL INFORMATION

APPLICANT: Stuehr, Dennis J.

APPLICANT: Adak, Subrata

TITLE OF INVENTION: Nucleic Acids Encoding Nitric Oxide Synthase Variants

FILE REFERENCE: 2243/3/04208

CURRENT APPLICATION NUMBER: US/09/661,258

CURRENT FILING DATE: 2000-09-13

NUMBER OF SEQ ID NOS: 9

SOFTWARE: Patentin version 3.1

SEQ ID NO 5.

Sequence 19, Application US/09747408

Patent No. 6670399

GENERAL INFORMATION:
APPLICANT: Green, Allan M.
TITLE OF INVENTION: Compounds And Methods For Modulating
TITLE OF INVENTION: Cerebral Amyloid Angiopathy
FILE REFERENCE: NBI-088
CURRENT APPLICATION NUMBER: US/09/747,408

CURRENT FILING DATE: 2000-12-22

PRIOR FILING DATE: 1999-12-23
APPLICANT: Green, Allan M.
APPLICANT: Gervais, Francine
TITLE OF INVENTION: Compounds And Methods For Modulating
TITLE OF INVENTION: Cerebral Amyloid Angiopathy
FILE REFERENCE: NBI-088
CURRENT PAPLICATION NUMBER: US/09/747,408
CURRENT PILING DATE: 2000-12-22
PRIOR APPLICATION NUMBER: 60/171,877
PRIOR PILING DATE: 1999-12-23
NUMBER OF SEQ ID NOS: 24
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 5, Application US/08612785B

Patent No. 5854204

GENERAL INFORMATION:
APPLICANT: Findeds, Mark A. et al.
TITLE OF INVENTION: Ab Peptides that Modulate b-Amyloid
TITLE OF INVENTION: Apgregation
TITLE OF INVENTION: Agregation
NUMBER OF SEQUENCE: 40

CORRESPONDENCE ADDRESS:
ADDRESSE: LAHIVE & COCKPIELD
STREET: 28 State Street, Suite 510
CITY: Boston
STREET: 28 State Street, Suite 510
CITY: Boston
STREET: 408

COUNTRY: USA
ZIP: 02109-1875

COMPUTER READABLE FORM:
MEDIUM TYPE: FIOPPPY disk
COMPUTER: IBM PC Compatible
COMPUTER: DEFARTING SYSTEM: PC-DOS/MS-DOS
CORPUTER: DEFARTING SYSTEM: PC-DOS/MS-DOS
CORPUTER: DEFARTING SYSTEM: PC-DOS/MS-DOS
CORPUTER: DEFARTING SYSTEM: PC-DOS/MS-DOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            89.7%; Score 26; DB 5; Length 7; 83.3%; Pred. APPLICANT: Schenk, Dale B.
APPLICANT: Schenk, Dale B.
APPLICANT: Bard, Frederique
APPLICANT: Yednock, Ted
TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
FILE REFERENCE: 152703-00476008.
CURRENT APPLICATION NUMBER: US/09/580,018
PRIOR APPLICATION NUMBER: US/09/322,289
PRIOR PLING DATE: 1999-05-28
NUMBER OF SEQ ID NOS: 77
                                                                                                                                                                                                                                                                                                      PEATURE:
CTHER INFORMATION: Description of Artificial Sequence:10-mer peptide
OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid

Patent No. 5652092
GENERAL INPORMATION:
GENERAL INPORMATION:
APPLICANT: Jacobsen, J. S.
APPLICANT: Vitek, M. P.
TITLE OF INVENTION: No. 5652092el Amyloid Precursor and Method of
TITLE OF INVENTION: Using Same to Access Agents Which Down-Regulate Formation
TITLE OF INVENTION: Of B-Amyloid Peptide
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 34; DB 1; Length 63; 100.0%; Pred. Patent No. 5703209

GENERAL INFORMATION:
APPLICANT: Jacobsen, J. S.
TITLE OF INVENTION: Using Same to Access Agents Which Down-Regulate Formation
TITLE OF INVENTION: of B-Amyloid Peptide
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSER: American Cyanamid Company
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100.0%; Score 34; DB 1; Length 63;

LENGTH: A mino acide
TYPE: Amino acide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 3, Application US/08464247A

Sequence 3, Application US/08464247A

Patent No. 5693478

GENERAL INFORMATION:
APPLICANT: Jacobsen, J. S.
APPLICANT: Vitek, M. P.
TITLE OF INVENTION: No. 5693478el Amyloid Precursor and Method of
TITLE OF INVENTION: Using Same to Access Agents Which Down-Regulate Formation
TITLE OF INVENTION: of B-Amyloid Peptide
NUMBER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: American Cyanamid Company
STREET: One Campus Drive
CITY: Parsippany
STATE: New Jerses
COUNTRY: United States

ADDRESSEE: American Cyanamid Company
